

~~SECRET~~

You mentioned that in the Krasnoyarsk area two industrial construction projects were underway, an aluminum plant and a highly guarded 1,500 meter long structure described as a penicillin plant. Please answer the following questions on these projects in the fullest possible detail.

- 1) Did you actually see the construction sites of the aluminum plant and the penicillin plant?
- 2) If you saw these plants, what were the circumstances under which you observed them? Were you employed at either project, or in a nearby area? How many times and from what distances did you see each project? On what dates did you observe these projects?
- 3) Please describe each plant site -- is there a river nearby; is it in a hilly area; is the area forested; what are the soil and rock conditions; are there level areas nearby suitable for workers' settlements; what kind of transportation serves the project?
- 4) What progress had been made on each plant at the time of your last observation? (foundations laid; walls up; roof on; machinery and equipment stored at the site or already installed)
- 5) What are the dimensions and features of each plant? (length; width; height; are the buildings equally wide along their entire length? is there any variation in height, wall thickness, or depth of foundation in different parts of the building? what types of windows and ventilation are there? are they all the same? describe the columns; what type of wall material was used?)
- 6) What ancillary facilities were under construction at each site? (workers' settlements; power plants; transmission lines; warehouses; separate structures of any kind) Please give a full description of each.
- 7) What construction organization was responsible for each job? What organization provided the guards at the penicillin plant? Were any of the officials in military uniform? How many workers would you estimate were employed at each project? Can you give the name of any construction official associated with either project?
- 8) Was there any evidence that either or both plants were high priority projects? Was there an abundance of construction equipment and building materials? Was work carried on at night-time? Did work continue into the winter longer than at other projects?
- 9) Do you know, or can you judge, when each project was started?
- 10) Please locate each of the plants on a map of the Krasnoyarsk area. Provide sketches of buildings if possible.

**SECRET**

11) If you did not actually see one or the other of these projects, what were the sources of your information? (newspapers, magazines, radio broadcasts, fellow workers, close acquaintances, casual acquaintances, any other source) If you learned of these projects by word of mouth, please assess the credibility of each of your sources. From how many of these sources did you hear of the projects? Was there any variation in the information provided by these sources?

12) If your information is from any of the above sources, please try to answer all of the above questions on the basis of everything you have heard or read about both of these projects.
